SCAN-LAC

ANTI-REFLECTIVE PAINT FOR CAD/CAM SCANNING

APPLICATIONS

- For metal abutments in cemented implant
- prosthetics.
  For metal positioners in screw-retained implant prosthetics

ADVANTAGES

- Provides a very thin, completely opaque and reflection free layer.
- Easily removable with water only.
- Direct application with a brush, improving control over the application area.

INSTRUCTIONS FOR USE

The consistency of the product is quite liquid. Due to its composition, it can easily evaporate if the container remains open.

We recommend pouring a small amount of product into the supplied cup to keep the bottle open for the shortest possible time.

A bottle of liquid thinner is included to adjust the product density in case it is too thick, which would create a layer that is too thick.
Paint the area with reflections to be scanned using the brush, creating a thin layer.

Allow a few seconds to dry, and the piece is ready to be scanned.

Any remaining residue can be easily removed with water.

STORAGE AND EXPIRATION

The product's stability is 2 years. Keep the product tightly closed in its original packaging in a cool, dry place

SALES FORMAT

0610-150	15 ml + 15 ml + paintbrush	Kit
